### Qualifiers Definitions

| Parameter  | Definition   | Qualifiers | Analysis                                    |
|--|--|------------|---|
| Target analyte detected in Cal Blank for HM or Method Blank is at or above LOQ, but the sample result:   | Below the LOQ  | B1         | Potency                                     |
|  | Below the maximum allowable concentration in Table 3.1   | B2         | Pesticides; Heavy Metals; Residual Solvents |
|  | LOQ & sample results were adjusted to reflect sample dilution  | D1         | All Areas (includes Microbiology)           |
| Intensities within 30%   | Relative intensity of a characteristic ion in a sample analyte exceeded the acceptance criteria w/ respect to reference spectra, indicating interference   | I1         | Potency; Pesticides; Residual Solvents      |
| Recovery from MS derived from dispensary-submitted sample prepared at ±20% of applicable maximum allowable concentration, or mid-level for Potency, was: | High, but recovery from LCS was within acceptance criteria   | M1         | All Areas                                   |
|  | Low, but recovery from LCS was within acceptance criteria  | M2         |   |
|  | Unusable because analyte concentration was disproportionate to the spike level, but recovery from LCS was within acceptance criteria.  | M3         |   |
|  | Analysis of a spiked sample required a dilution such that the spike recovery calculation doesn't provide useful information, but recovery from the associated LCS was within acceptance criteria.  | M4         | All Areas                                   |
|  | Analyte concentration was determined by the method of standard addition, in which the standard is added directly to the aliquots of the analyzed sample.   | M5         | All Areas                                   |
|  | A description of the variance is described in the final report of testing according to requirements in the quality assurance plan, the applicable SOP procedure, or method criteria made to ensure scientifically valid and defensible testing results, and the reason for the variance. | N1         | All Areas (includes Microbiology)           |
| Prepared at ±20% of applicable maximum allowable concentration, or mid-level for Potency   | Relative percent difference for LCS and LCSD exceeded 20%, but recovery for LCS and LCSD, is within acceptance criteria  | R1         | All Areas                                   |
|  | RPD for a sample & duplicate exceeded the limit of more than 40% between the values obtained for confirmation testing.   | R2         | Pesticides & Residual Solvents              |

Sample: 2309SAG0032.0113

Strain: Hybrid Blend  
Batch#: ARC-DIST91423; Batch Size: g  
Sample Received: 09/20/2023; Report Created: ; Expires:

THC Distillate (amended)  
Concentrates & Extracts, Distillate

Qualifiers Definitions

| Parameter  | Definition   | Qualifiers | Analysis                                    |
|--|--|------------|---|
| Target: analyte detected in Cal Blank for HM or Method Blank is at or above LOQ, but the sample result.  | Below the LOQ  | B1         | Potency                                     |
|  | Below the maximum allowable concentration in Table 3.1   | B2         | Pesticides; Heavy Metals; Residual Solvents |
|  | LOQ & sample results were adjusted to reflect sample dilution  | D1         | All Areas (includes Microbiology)           |
| Intensities within 30%   | Relative intensity of a characteristic ion in a sample analyte exceeded the acceptance criteria w/ respect to reference spectra, indicating interference.  | I1         | Potency; Pesticides; Residual Solvents      |
| Recovery from MS derived from dispensary-submitted sample prepared at ±20% of applicable maximum allowable concentration, or mid-level for Potency, was: | High, but recovery from LCS was within acceptance criteria   | M1         | All Areas                                   |
|  | Low, but recovery from LCS was within acceptance criteria  | M2         |   |
|  | Unusable because analyte concentration was disproportionate to the spike level, but recovery from LCS was within acceptance criteria.  | M3         |   |
|  | Analysis of a spiked sample required a dilution such that the spike recovery calculation doesn't provide useful information, but recovery from the associated LCS was within acceptance criteria.  | M4         |   |
|  | Analyte concentration was determined by the method of standard addition, in which the standard is added directly to the aliquots of the analyzed sample.   | M5         | All Areas                                   |
|  | A description of the variance is described in the final report of testing according to requirements in the quality assurance plan, the applicable SOP procedure, or method criteria made to ensure scientifically valid and defensible testing results, and the reason for the variance. | N1         | All Areas (includes Microbiology)           |
| Prepared at ±20% of applicable maximum allowable concentration, or mid-level for Potency   | Relative percent difference for LCS and LCSD exceeded 20%, but recovery for LCS and LCSD, is within acceptance criteria  | R1         | All Areas                                   |
|  | RPD for a sample & duplicate exceeded the limit of more than 40% between the values obtained for confirmation testing.   | R2         | Pesticides & Residual Solvents              |
