Qualifiers Definitions

Parameter	Definition	Qualifiers	Analysis
Target analyte detected in Cal Blank for HM or Method Blank is at or above LOQ, but the sample result:	Below the LOQ	B1	Potency
	Below the maximum allowable concentration in Table 3.1	B2	Pesticides; Heavy Metals; Residual Solvents
	LOQ & sample results were adjusted to reflect sample dilution	D1	All Areas (includes Microbiology)
Intensities within 30%	Relative intensity of a characteristic ion in a sample analyte exceeded the acceptance criteria w/ respect to reference spectra, indicating interference	I1	Potency; Pesticides; Residual Solvents
Recovery from MS derived from dispensary-submitted sample prepared at ±20% of applicable maximum allowable concentration, or mid-level for Potency, was:	High, but recovery from LCS was within acceptance criteria	M1	All Areas
	Low, but recovery from LCS was within acceptance criteria	M2	
	Unusable because analyte concentration was disproportionate to the spike level, but recovery from LCS was within acceptance criteria.	M3	
	Analysis of a spiked sample required a dilution such that the spike recovery calculation doesn't provide useful information, but recovery from the associated LCS was within acceptance criteria.	M4	All Areas
	Analyte concentration was determined by the method of standard addition, in which the standard is added directly to the aliquots of the analyzed sample.	M5	All Areas
	A description of the variance is described in the final report of testing according to requirements in the quality assurance plan, the applicable SOP procedure, or method criteria made to ensure scientifically valid and defensible testing results, and the reason for the variance.	N1	All Areas (includes Microbiology)
Prepared at ±20% of applicable maximum allowable concentration, or mid-level for Potency	Relative percent difference for LCS and LCSD exceeded 20%, but recovery for LCS and LCSD, is within acceptance criteria	R1	All Areas
	RPD for a sample & duplicate exceeded the limit of more than 40% between the values obtained for confirmation testing.	R2	Pesticides & Residual Solvents

Sample Received: 09/20/2023; Report Created: ; Expires:

THC Distillate (amended)
Concentrates & Extracts, Distillate

Qualifiers Definitions

Parameter	Definition	Qualifiers	Analysis
Target: analyte detected in Cal Blank for HM or Method Blank is at or above LOQ, but the sample result.	Below the LOQ	B1	Potency
	Below the maximum allowable concentration in Table 3.1	B2	Pesticides; Heavy Metals; Residual Solvents
	LOQ & sample results were adjusted to reflect sample dilution	D1	All Areas (includes Microbiology)
Intensities within 30%	Relative intensity of a characteristic ion in a sample analyte exceeded the acceptance criteria w/ respect to reference spectra, indicating interference.	I1	Potency; Pesticides; Residual Solvents
Recovery from MS derived from dispensary-submitted sample prepared at ±20% of applicable maximum allowable concentration, or mid-level for Potency, was:	High, but recovery from LCS was within acceptance criteria	M1	All Areas
	Low, but recovery from LCS was within acceptance criteria	M2	
	Unusable because analyte concentration was disproportionate to the spike level, but recovery from LCS was within acceptance criteria.	M3	
	Analysis of a spiked sample required a dilution such that the spike recovery calculation doesn't provide useful information, but recovery from the associated LCS was within acceptance criteria.	M4	
	Analyte concentration was determined by the method of standard addition, in which the standard is added directly to the aliquots of the analyzed sample.	M5	All Areas
	A description of the variance is described in the final report of testing according to requirements in the quality assurance plan, the applicable SOP procedure, or method criteria made to ensure scientifically valid and defensible testing results, and the reason for the variance.	N1	All Areas (includes Microbiology)
Prepared at ±20% of applicable maximum allowable concentration, or mid-level for Potency	Relative percent difference for LCS and LCSD exceeded 20%, but recovery for LCS and LCSD, is within acceptance criteria	R1	All Areas
	RPD for a sample & duplicate exceeded the limit of more than 40% between the values obtained for confirmation testing.	R2	Pesticides & Residual Solvents

Qualifiers Definitions

Parameter	Definition	Qualifiers	Analysis
±20% for Potency; ±30% for Pesticides/RS; ±10% HM of true value	Recovery from CCV standards exceeded the acceptance limits, but the value sample/s target analytes were not detected above the maximum allowable concentrations in Table 3.1	V1	All Areas
TLD shall include in the final report of testing the following data qualifier notations if:	Sample integrity was not maintained	Q1	All Areas (includes Microbiology)
	Sample is heterogenous, & sample homogeneity could not be readily achieved using routine laboratory practices	Q2	
	Testing result is for informational purposes only & cannot be used to satisfy dispensary testing requirements for sale or dispensing or labeling requirements	Q3
